

OUTLINE

I. Introduction

- * Brief introduction to HTML content sections
- * Introduce the three elements:
 - * `<article>`
 - * `<section>`
 - * `<aside>`
- * Explain that these elements help organize webpage content

II. `<article>` Element

- * Definition of `<article>`
- * Purpose: used for standalone or independent content
- * Examples:
 - * News articles
 - * Blog posts
 - * Forum posts
- * Show a simple `<article>` code example

III. `<section>` Element

- * Definition of `<section>`
- * Purpose: groups related content under a specific topic
- * Examples:
 - * About Us
 - * Services
 - * School information
- * Show a simple `<section>` code example

IV. `<aside>` Element

- * Definition of `<aside>`
- * Purpose: contains additional or supporting information
- * Examples:
 - * Related posts
 - * Tips
 - * Additional information
- * Show a simple `<aside>` code example

V. Comparison of the Three Elements

- * `<article>` → standalone content
- * `<section>` → related/grouped content
- * `<aside>` → additional/supporting content

VI. Combined Example

- * Show how `<article>`, `<section>`, and `<aside>` can be used together

- * Briefly explain the role of each element in the example

VII. Conclusion

- * Review the purpose of the three elements
- * Explain why semantic HTML helps organize webpages
- * End with a short thank-you
